

## Built for Wet Environments

All PSS industrial grade touch screens are 1000 nits luminance rated, equipped with light adjustment sensors ensuring excellent visibility and responsiveness, even in bright outdoor conditions.

Our monitor components have been specifically selected for use in the carwash industry. The 6mm bonded glass overlay and the high IP ratings ensure reliable functionality in wet environments.

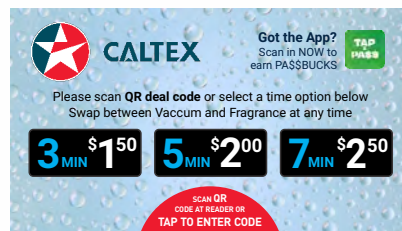

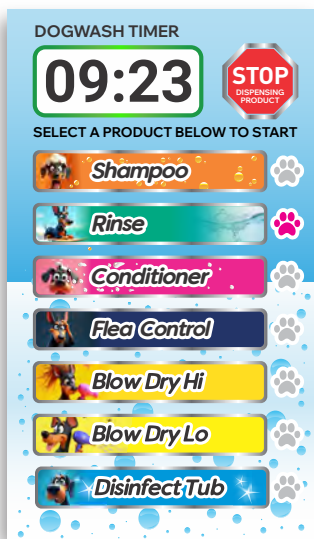

## Custom Graphics for a great customer experience at your site

PSS specialise in custom Touchscreen graphics specifically created for your appliances, for that extra **WOW** factor!

Your logos and site graphic assets will be used to create a continuity of branding across your touchscreens.

This raises awareness of your brand across your customer base, and is vital for ensuring returning trade.

PSS believe that a clean streamlined user interface (UI) minimises customer confusion with its step-by-step approach.

## Screen Sizes & Aspects

PSS offer a range of screen sizes and aspects, to suit many faceplate applications.

This is particularly useful in retro-fit situations, when there are size constraints due to other hardware on the faceplate.

Pictured here is our current range of touchscreen sizes and aspect ratios:

Talk to us about your appliances on site, and we will create a configuration that works for you!
